Science test

Paper 1

First name ____________________________

Last name ____________________________

School ______________________________

Remember

- The test is 1 hour long.
- You will need: pen, pencil, rubber, ruler, protractor and calculator.
- The test starts with easier questions.
- Try to answer all of the questions.
- The number of marks available for each question is given below the mark boxes in the margin. You should not write in this margin.
- If you are asked to plan an investigation, there will be space for you to write down your thoughts and ideas.
- Do not use any rough paper.
- Check your work carefully.
- Ask your teacher if you are not sure what to do.
1. The table below shows the number of boats used for catching herring fish in the Norwegian Sea between 1963 and 1967.

<table>
<thead>
<tr>
<th>year</th>
<th>number of fishing boats</th>
</tr>
</thead>
<tbody>
<tr>
<td>1963</td>
<td>16</td>
</tr>
<tr>
<td>1965</td>
<td>284</td>
</tr>
<tr>
<td>1967</td>
<td>326</td>
</tr>
</tbody>
</table>

The bar chart below shows the total mass of herring caught in the Norwegian Sea between 1963 and 1967.

Use the information above to help you answer parts (a) (i), (ii) and (iii).

(a) (i) Why did the mass of herring caught increase between 1963 and 1965?

(ii) Suggest why the mass of herring caught decreased between 1965 and 1967.
(iii) Herring cannot breed until they are four years old. Fishing for herring was banned in the Norwegian Sea from 1972 to 1976. Suggest one reason why fishing for herring was banned for this period.

(b) The diagram below shows a food web in the Norwegian Sea.

(i) How could a decrease in the number of herring cause a decrease in the number of sand eels?

(ii) How could a decrease in the number of herring cause an increase in the number of sand eels?

maximum 5 marks
2. The drawings below show the trees in a woodland area at the beginning of May and at the end of May.

beginning of May

end of May

The graph below shows the amount of light reaching the top of the trees and the woodland floor over one year.

<table>
<thead>
<tr>
<th>Key</th>
</tr>
</thead>
<tbody>
<tr>
<td>light reaching the top of the trees</td>
</tr>
<tr>
<td>light reaching the woodland floor</td>
</tr>
</tbody>
</table>

amount of light

Jan Feb Mar Apr May Jun Jul Aug Sep Oct Nov Dec

month
(a) Why does the amount of light reaching the woodland floor decrease during May?

(b) Plants grow on the woodland floor.

Explain why these plants grow bigger and faster when there is plenty of light.

(c) Respiration takes place in the cells of all plants.

Complete the word equation for respiration.

\[ \text{oxygen} + \underline{\text{_____________}} \rightarrow \text{carbon dioxide} + \underline{\text{_____________}} \]
3. (a) The average life span of a lion in a zoo is 22 years. The average life span of a lion in the wild is 17 years.

Suggest two reasons why lions live longer in a zoo than in the wild.

1. ____________________________________________

2. ____________________________________________

(b) John found the following data about five mammals.

<table>
<thead>
<tr>
<th>mammal</th>
<th>average length of pregnancy (days)</th>
<th>average life span (years)</th>
</tr>
</thead>
<tbody>
<tr>
<td>mouse</td>
<td>20</td>
<td>2</td>
</tr>
<tr>
<td>guinea pig</td>
<td>65</td>
<td>7</td>
</tr>
<tr>
<td>leopard</td>
<td>96</td>
<td>15</td>
</tr>
<tr>
<td>chimpanzee</td>
<td>250</td>
<td>40</td>
</tr>
<tr>
<td>whale</td>
<td>315</td>
<td>50</td>
</tr>
</tbody>
</table>

He plotted points using data from the table.
(i) Using the points John plotted, draw a line of best fit.

(ii) From the graph, describe the relationship between the average length of pregnancy and the average life span.

(c) John found data about three other mammals.

<table>
<thead>
<tr>
<th>mammal</th>
<th>average length of pregnancy (days)</th>
<th>average life span (years)</th>
</tr>
</thead>
<tbody>
<tr>
<td>human</td>
<td>266</td>
<td>72</td>
</tr>
<tr>
<td>horse</td>
<td>340</td>
<td>25</td>
</tr>
<tr>
<td>giraffe</td>
<td>440</td>
<td>17</td>
</tr>
</tbody>
</table>

(i) Plot these three points on the graph on the opposite page.

(ii) Do these points fit the relationship you described in part (b) (ii)? Tick the correct box.

yes ☐ no ☐

Use the graph to give a reason for your answer.

maximum 6 marks
The table below shows the melting points and boiling points of four elements.

<table>
<thead>
<tr>
<th>element</th>
<th>melting point (°C)</th>
<th>boiling point (°C)</th>
</tr>
</thead>
<tbody>
<tr>
<td>aluminium</td>
<td>660</td>
<td>2520</td>
</tr>
<tr>
<td>iron</td>
<td>1540</td>
<td>2760</td>
</tr>
<tr>
<td>magnesium</td>
<td>650</td>
<td>1100</td>
</tr>
<tr>
<td>mercury</td>
<td>−39</td>
<td>357</td>
</tr>
</tbody>
</table>

When answering the questions below, you may give the name of an element more than once.

Which element in the table is:

(i) a liquid at 0°C?

(ii) a solid at 1500°C?

(iii) a gas at 500°C?

(iv) a liquid over the biggest temperature range?
(b) The melting point and boiling point of nitrogen are marked on the scale below.

(i) Draw an arrow on the scale above to show the temperature at which water freezes.

(ii) When water is a liquid, what is the physical state of nitrogen? Tick the correct box.

   solid   liquid   gas

   1 mark

(iii) What is the physical state of nitrogen at $-200^\circ\text{C}$? Tick the correct box.

   solid   liquid   gas

   1 mark

maximum 7 marks

KS3/08/Sc/Tier 5-7/P1 9
5. Lavender oil is a perfume obtained from lavender flowers. Steam at 100°C is passed through the flowers in the apparatus below.

Water vapour and lavender oil vapour pass down a copper tube towards a separator.

(a) (i) The lavender flowers are heated in a container with a sealed lid. Why must the lid be sealed?

________________________________________________________________________

________________________________________________________________________

(ii) What would happen if the container did not have a pressure-release valve?

________________________________________________________________________

________________________________________________________________________
(b) Lavender oil vapour and water vapour cool as they pass down the copper tube.
A mixture of lavender oil and water collects in the separator.

(i) What is the change in the physical state of both lavender oil vapour and water vapour as they cool?

from ______________________ to ______________________

(ii) Look at the separator.

How does this show that the water is denser than lavender oil?

(c) Rosie poured some lavender oil into an oil burner. She heated it with a candle.

The oil changed state.

Which diagram represents this change of state?
Write the letter.

maximum 5 marks
6. (a) Elephants keep cool by losing heat from their ears.

Predict which elephant can lose more heat from its ears.

_________________________ elephant

Give the reason for your answer.

_________________________

(b) Ben filled two identical cans with 250 cm\(^3\) of hot water. He wrapped strips of metal around them to model the elephants’ ears.

He recorded the temperature of the water in each can every 5 minutes. The table shows his results.

<table>
<thead>
<tr>
<th>time (minutes)</th>
<th>temperature (°C)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>can A</td>
</tr>
<tr>
<td>0</td>
<td>60</td>
</tr>
<tr>
<td>5</td>
<td>54</td>
</tr>
<tr>
<td>10</td>
<td>50</td>
</tr>
<tr>
<td>15</td>
<td>46</td>
</tr>
<tr>
<td>20</td>
<td>43</td>
</tr>
</tbody>
</table>
(i) Ben started with water at the same temperature in both cans. Give one other way he made his test fair.

(ii) He plotted the results for can A and can B and drew lines of best fit.

Why is it more useful to present these results in a graph rather than a table?

(iii) The water in can A cooled more quickly than the water in can B. Does this support your prediction in part (a)? Tick the correct box.

   yes []  no []

Explain your answer.

(c) Ben repeated the investigation. Instead of a thermometer he used a temperature sensor and a data logger. Give one advantage of this.

maximum 5 marks
7. Nina’s bicycle has a front lamp and a rear lamp. Both lamps are connected to the same battery.

(a) The circuit diagram for the lamps is drawn below.

(i) On the circuit diagram above, place a letter A to show the position of a switch to turn only the front lamp on and off.

(ii) On the circuit diagram above, place a letter B to show the position of a switch to turn both lamps on and off at the same time.
(b) The bulb in the rear lamp gives out white light. White light is a mixture of all the colours of light.

The plastic cover acts as a red filter. Red light passes through the filter.

What happens to the other colours that do not pass through?

(c) Nina replaces the battery with a generator called a dynamo. When Nina pedals her bicycle, the back wheel turns the generator.

Complete the sentences below using words from the box.

As Nina pedals, _________________ energy in her muscles is changed to kinetic energy.

When the generator turns, kinetic energy is changed to useful _________________ energy in the wires. This energy in the wires is changed to useful _________________ energy in the bulb.

When the lamps are on, some of the energy in the bulb is wasted as _________________ energy.

maximum 7 marks
8. The table shows information about three planets in our solar system.

<table>
<thead>
<tr>
<th>planet</th>
<th>time taken to orbit the Sun (Earth-years)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Mars</td>
<td>2.0</td>
</tr>
<tr>
<td>Venus</td>
<td>0.6</td>
</tr>
<tr>
<td>Earth</td>
<td>1.0</td>
</tr>
</tbody>
</table>

(a) Give one reason why Venus takes less time than Earth to orbit the Sun.

(b) The diagram below shows the orbits of Venus and Earth. The Sun is a source of light. Venus does not produce its own light.

On the diagram above, draw rays of light to show how Venus can be seen from Earth. Use a ruler.

Draw an arrow on each ray to show the direction of light.
(c) The diagram below shows how the astronomer Ptolemy drew the solar system 2000 years ago.

(i) The planets Uranus and Neptune are missing from his diagram.

Suggest why Ptolemy did not include these planets in his diagram.

........................................................................................................................................
........................................................................................................................................

(ii) Today, we know the correct arrangement of the planets in our solar system.

Give one way the diagram above is incorrect.

Complete the sentence below.

In the correct arrangement.................................................................................................................................
........................................................................................................................................

maximum 5 marks
9. Kava is a drug. It dissolves in alcohol but **not** in water. A scientist tested kava to see if it can reduce the human heart rate. Before testing the drug on humans, she tested it on water fleas.

![Water flea diagram](image)

(a) She gave two groups of water fleas a different treatment.

<table>
<thead>
<tr>
<th>group</th>
<th>number of water fleas</th>
<th>treatment</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>20</td>
<td>one drop of kava dissolved in alcohol</td>
</tr>
<tr>
<td>2</td>
<td>20</td>
<td>one drop of alcohol</td>
</tr>
</tbody>
</table>

- She placed the water fleas in a dish of water under a microscope.
- She measured the heart rate of each water flea before the treatment.
- She waited 30 seconds after the treatment was given and measured the heart rate again.
- She calculated the average heart rate for each group.

(i) Why did the scientist measure the heart rate of the water fleas before the treatment?

(ii) After giving the treatment, why did she wait for 30 seconds before measuring the heart rate?

---

9ai 1 mark

9a(ii) 1 mark
(iii) How could the scientist increase the reliability of the investigation?

(b) The results of the experiment are shown below.

(i) How will the results from group 2 help in the experiment?

(ii) How can the scientist use the results above to work out the effect of kava alone on the average heart rate of water fleas?

(c) From this experiment, why could she not be certain how kava will affect humans?

*maximum 6 marks*
10. The photograph below shows bacteria that have developed resistance to antibiotics. They are called MRSA bacteria.

(a) When MRSA bacteria reproduce, they pass on their resistance to antibiotics to the next generation.

What part of a cell passes on information?

(b) MRSA bacteria can cause serious infections in people who are ill in hospital. The bacteria can live on a healthy person’s skin or in their lungs without causing any harm.

Use this information to fill in the table below. Suggest two ways MRSA bacteria can be spread from person to person. Suggest how the spread of the bacteria can be prevented for each method.

<table>
<thead>
<tr>
<th>method of spread</th>
<th>method of prevention</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td></td>
</tr>
<tr>
<td>2</td>
<td></td>
</tr>
</tbody>
</table>
(c) People can be vaccinated against some diseases caused by bacteria or viruses.

Describe how vaccination prevents a person getting a disease.

maximum 6 marks
11. (a) Satish poured some water into a long tank in the school laboratory. He used a plunger at one end to make a wave.

(i) The wave travelled to the other end of the tank. The speed of the wave was 2 m/s.

How long did the wave take to travel to the other end?

\[
\text{Time} = \frac{\text{Distance}}{\text{Speed}} = \frac{1.5 \text{ m}}{2 \text{ m/s}} = \frac{1.5}{2} \text{ s}
\]

(ii) Satish investigated how the depth of water in his tank affected the speed of the waves. Write a plan to show how he could do this.

- Measure the depth of water in the tank.
- Vary the depth of water in the tank.
- Record the speed of the waves for each depth.
- Analyze the relationship between depth and speed.
(b) Satish found the following information about waves in the sea.

<table>
<thead>
<tr>
<th>depth of sea water (m)</th>
<th>speed of wave (m/s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>10</td>
<td>9.9</td>
</tr>
<tr>
<td>20</td>
<td>14.0</td>
</tr>
<tr>
<td>30</td>
<td>17.2</td>
</tr>
<tr>
<td>40</td>
<td>19.8</td>
</tr>
</tbody>
</table>

The diagram below shows how the depth of sea water changes.

Use the information in the table above to help you describe the speed of a wave as it travels from A to B and from B to C.

A to B

B to C

*maximum 6 marks*
12. (a) The chemical formula for hydrochloric acid is HCl. The chemical formula for sodium hydroxide is NaOH.

When they react together, two products are formed. The chemical formula for one product is NaCl.

(i) Complete the word equation below with the names of both products.

(ii) On the dotted line, give the chemical formula of the other product.

\[
\text{sodium} + \text{hydrochloric acid} \rightarrow \hspace{1cm} + \hspace{1cm} \text{NaCl}
\]

(b) In experiment 1, Molly put two beakers on a balance. One contained 20 cm\(^3\) of hydrochloric acid. The other contained 20 cm\(^3\) of sodium hydroxide solution. The total mass was 163.5 g.

She poured the acid onto the sodium hydroxide. They reacted.

Why did the reading on the balance not change?
(c) In experiment 2, Molly put two beakers on a balance. One contained 20 cm³ of hydrochloric acid. The other contained 5 g of sodium carbonate. She poured the acid onto the sodium carbonate. They reacted. Two of the products are the same as in experiment 1.

(i) Complete the word equation with the names of the three products.

\[
\text{sodium + hydrochloric acid} \rightarrow \underline{\text{carbonate}} + \underline{\text{acid}} + \underline{\text{product}}
\]

(ii) The total mass at the start was 149.0 g. When the reaction stopped, the reading on the balance was 147.0 g. Why was there a loss of mass in this reaction?

\[\text{mass of reactants} - \text{mass of products} = \text{loss of mass}\]

maximum 6 marks
13. Oliver clamped a wooden plank to a desk. There was a 40 cm overhang as shown in diagram 1.

Oliver added masses to the end of the wooden plank as shown in diagram 2. He measured the sag. The graph below shows his results.

(a) What measurements would Oliver need to take to work out the sag?
(b) Oliver repeated his test with a new plank with an 80 cm overhang. His results are shown below.

<table>
<thead>
<tr>
<th>mass (g)</th>
<th>sag (cm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>1.0</td>
</tr>
<tr>
<td>500</td>
<td>15.0</td>
</tr>
<tr>
<td>1000</td>
<td>25.0</td>
</tr>
<tr>
<td>1500</td>
<td>31.0</td>
</tr>
<tr>
<td>2000</td>
<td>35.0</td>
</tr>
</tbody>
</table>

(i) Plot the results from Oliver’s second test on the grid opposite. Use the points to draw a line of best fit.

(ii) In the second test the plank sagged with no mass added to it. Explain what caused this sag.

(c) Compare the results of Oliver’s two tests.

(i) How are the results similar for each test?

(ii) How are the results different in the second test?

END OF TEST

maximum 6 marks
